

Transcranial Direct Current Stimulator

Product Name:	Transcranial Direct Current Stimulator
Brand:	ZE
Model:	Z905
Category:	ESD TEST Equipments

System Includes	Features	Specifications
	<p>Transcranial Direct Current Stimulation (tDCS) is a brain stimulation technique that has been available for several decades; the procedure was earlier described as brain polarization. As presently practised, it involves the delivery of a very small direct current (about 1-3 mA) for a brief period (about 20 min) through appropriately-sized electrodes, one or both of which are placed upon the scalp.</p> <p>Although tDCS has not been formally approved for any clinical indication, it has been experimentally used with some success in a variety of neuropsychiatric disorders ranging from depression to refractory auditory hallucinations in schizophrenia. tDCS is very well tolerated.</p> <p>The last decade has witnessed an explosion of research in the field, with nearly a thousand hits emerging from PubMed, alone.</p>	<p>Power supply : 9 V battery. 10mA max Dimensions : 125 x 75 x 29 mm 150gms Warranty : 12 months</p>
